To whom it may concern:

I am pleased to write this letter in support of Cliff Kettemborough summarizing his performance at UC Irvine Extension and his contributions as an instructor as well as toward academic program development.

Dr. Kettemborough has taught courses in the Engineering and Information Technology disciplines since mid-2000. His areas of teaching expertise include engineering management, data communications, Java programming, relational database design, computer network design, Internet security, and rapid software development. In his most recent teaching assignments this past spring quarter (courses on Internet security and rapid application development), he received excellent reviews on student evaluations and several of his students sent additional emails thanking him for providing a high-quality learning experience.

In addition to his contributions in the classroom, Dr. Kettemborough has served on several certificate program advisory committees including Web technologies, software engineering, Java programming, and advanced software technologies. His perspective on technology and on the needs of corporations in the "real world" in terms of continuing education has proven extremely valuable.

I have enjoyed working with Dr. Kettemborough these years and have appreciated his advice and insight. Dr. Kettemborough would be a valuable asset to any organization seeking an individual with competent management, technical, and communications skills.

Sincerely,

Stefano M. Stefan, Ph.D.
Assistant Director
Information Technologies Program
